REACH, RoHS, SCIP, WEEE, dual use...

We support you in ensuring the conformity of your products and production processes with international directives.

Material compliance

Your customers want to know whether:

- Your production is REACH – compliant.
- Your products comply with the RoHS Directive.
- You would make a product entry in the SCIP database of the EU.
- You comply with the obligations of the WEEE Directive.
- You use conflict minerals and (if so) how you deal with them.
- What risks (e.g. for child labour) exist in your supply chain.
- Which of your products are „dual use“ goods.

We help you to gain an overview of the effective requirements for your company. And we support you in implementing the necessary measures. **Our services:**

- Workshops and training for an overview of the requirements of the international guidelines.
- Clarification of whether your products and processes are subject to the various directives.
- Analysing your raw materials and components for hazardous substances and defining the need for action with regard to REACH or RoHS conformity.
- Support in obtaining the necessary information from suppliers (sample letters, substance lists, etc.).
- Support in obtaining authorisation for the use of REACH-regulated substances.
- Clarification of special regulations regarding REACH, PoHS etc. in your sales market (e.g. USA, China etc.).
