The circular economy is a sustainable model that focuses on the efficient use of resources and the reduction of waste. It integrates reuse, recycling, repair and resource-conserving production into the material cycle. This not only protects the environment but also strengthens companies by reducing dependence on raw materials, lowering production costs and opening access to new markets and funding. In the long term, it creates ecological, economic and competitive advantages.

Circular economy

Typical challenges faced by our clients

- What are the current legal requirements?
- How can the circular economy be integrated into existing processes and supply chains?

Our approach: support where you need it

Many companies lack the knowledge or capacity to develop circular economy strategies. We help you get started by providing regulatory clarity, supporting your management system and implementing measures in a structured way.

1. Starting point analysis and identifying opportunities

We analyze your material flows, company structures and needs, and together develop a realistic strategy.

Result: Overview of your current situation and potential measures, including opportunities and risks.

2. Regulatory compliance

We inform your team about the current legal situation in Switzerland and the EU and identify deviations that affect your company or industry.

Result: Overview of applicable regulations and a compliance checklist.

3. Strategy development for management systems

The circular economy must be embedded in corporate management. All production steps and stakeholder needs are taken into account.

Result: A tailored strategy with concrete steps and measures for implementation.

4. Life cycle assessment (LCA) and ecodesign

With the EU Ecodesign Regulation, requirements for production, reparability, recyclability and transparency are increasing. We provide technical and strategic support.

Result: Life cycle analysis, identification of recycling and repair potential, and an overview of industry-specific obligations.

Circular economy

5. Certificates

We advise you on relevant certificates that enhance your market position and strengthen customer trust.

Result: Status quo assessment and guidance for passing process audits.

Your benefits when switching to a circular economy

- Ecological and economic advantages that improve competitiveness
- Reduced dependence on raw materials and increased customer satisfaction
- Full compliance with current legal requirements
