We can assist you with conducting contaminated site investigations and developing disposal, remediation, and monitoring plans.

Contaminated site surveys

Our services:

Contaminated Site Assessment

We conduct historical and/or technical contaminated site assessments for your property (business site, former landfill) and, if necessary, also develop remediation and monitoring measures in accordance with the Contaminated Sites Ordinance.

Soil Investigation

We conduct soil investigations for your property and evaluate the results in accordance with the Soil Contamination Ordinance.

Excavation Supervision

We supervise excavation work on construction projects involving contaminated soil.

Risk Assessment and Remediation Supervision

We determine the level of contamination in the soil, assess the risk posed by contaminated sites, and estimate the loss in property value or remediation costs for the property.
