For sustainable buildings:

We provide comprehensive support for remediation and new building work and manufacturer-neutral energy efficiency advice.

Energy optimisation of buildings

By your side from strategic planning to construction and beyond:

- Analysis of your building stock (strategic energy planning)
- GEAK®/GEAK®-Plus building analysis: energy efficiency, economic viability of remedial measures, grant applications
- Minergie certification
- Energy performance certificates for planning applications
- Building physics (thermal bridges, moisture protection)
- Alternative heating systems (renewable heating incentive consulting): optimised heating systems, heating capacity design and geothermal probes
- Use of renewable energy sources: solar thermal power, photovoltaic power, etc., consumer communities
- Operational optimisation
- Assistance with grant applications
- And more: room acoustics, noise control certification for heat pumps, railway and road noise control certification, hazardous materials surveys (asbestos, PCBs)

Project references and standards

- Consultant on the 'bern-saniert' programme run by Bern City Council (Silvio Borella)
- GEAK® expert
- Certified energo® operational optimisation partner since 2006
- Accredited energy consultant for the Canton of Solothurn since 2010
- Accredited renewable heating incentive consultant (Energieschweiz) since 2019
- Minergie® expert partner since 2010
- Calculations in accordance with SIA standards (Swiss Society of Engineers and Architects)
- More than 100 GEAK® and GEAK®-Plus energy certificates issued
- New construction and remediation consultant for more than 250 building owners
