In many sectors of industry, the environmental protection and safety requirements that an industrial or commercial enterprise is required to comply with can be an extensive and complex minefield. The person responsible for these matters in your organisation can often be required to address these issues on an almost daily basis, making this a time-consuming obligation. We offer the following services to support you in dealing with these tasks in a timely and efficient manner.

Operational environmental protection and water pollution control, waste management & the circular economy

Our services:

Ongoing operational environmental protection consulting service

Has your operational analysis revealed that you need to act now to ensure that your business complies with environmental and OHS legislation?

We can help you with:

- Evaluation, planning and cost-optimised implementation of improvement and remedial measures.
- Resolving existing operational environmental protection and OHS issues.

Disposal and recycling concepts for excavated material, demolition materials and industrial waste

- Disposal concept: We will examine and analyse the waste or material fractions, organise pilot tests where necessary, and draw up the appropriate disposal and recycling concept.
- Optimised disposal methods: We will identify the most cost-effective legislation-compliant disposal methods and obtain all necessary permits.
- Industrial waste management: We will obtain analyses, test processes and draw up the specifications for your facility.
- The circular economy: We can develop circular-economy-friendly concepts.

Operational water pollution control

- Management of industrial effluents: We will collect the required historical data and analyses, evaluate processes and draw up the specifications for your facility.
- Operational water pollution control consulting: We will advise you on compliance with water pollution control regulations, e.g. with respect to the safety of storage and goods-handling sites.
- Authorised to carry out private inspections and reporting in the Canton of Zurich: Our colleague Rolf Gerber is authorised to carry out private inspections and reporting on projects and plants in the Canton of Zurich (inspections of industrial effluent, industrial waste, firefighting water reservoir provision and the safety of cargo-handling sites).
