Support for the KliK Foundation's heating network funding programme

The Climate Protection and CO_2 Compensation Foundation's KliK heating networks program provides financial support to operators of heating networks that use energy sources from renewable sources or waste heat.

Funding projects through CO_2 reductions

The following energy sources are eligible for funding:

- Biomasse
- Waste heat from water or waste water
- Industrial waste heat
- Waste heat from waste incineration plants (KVA)

Advantages of participating in the program There are a number of reasons why the heat network subsidy program is very attractive for operators of heat networks. It includes an annual subsidy of CHF 100 to 160 per reduced tonne of CO_2 until the end of 2030. In addition, a preliminary assessment is carried out very quickly and does not involve any costs for the heat network operator. The costs for carrying out the annual monitoring and verification are also covered in full by the KliK Foundation.

Under the funding programme for district heating networks using climate-friendly energy sources, new projects could only be registered until 31 December 2025. Consequently, the review for admitting newly registered projects will only be carried out for projects that were registered before 1 January 2026.
This is against the backdrop that the statutory offsetting obligation for fuel importers—and thus the mandate of the KliK Foundation to finance climate protection projects—remains in force until the end of 2030. Any continuation beyond that date is still uncertain. Registration of a new or expanded district heating network using renewable energy sources was therefore only possible up to and including 31 December 2025.

If you have any questions or need clarification, you can reach us at the following email address:
waermeverbuende@neosys.ch

Our services:

- Supervision of newly registered projects included in the programme
- Review of the inclusion criteria for newly registered projects
- Answering any queries about the heating networks programme
- Implementation of annual monitoring (data collection, calculation of emissions saved and funding amount per project, contact with heat network operators, exchange with verification body)
- Validation of the heating networks programme
