More and more companies are taking advantage of the opportunity to make their progress in the area of sustainability visible and build trust through transparent reporting. In addition, legal requirements in this area are increasing, such as the Swiss Code of Obligations (CO) on non-financial reporting or the EU Sustainability Reporting Directive (CSRD). These require structured disclosure of environmental, social and governance (ESG) issues. However, it is not only regulatory requirements that are increasing; customers, investors and suppliers also expect detailed sustainability information.

## Typical challenges faced by our customers:

- Which legal requirements and standards (OR, CSRD, GRI, ESRS, VSME, TCFD, SBTi, CDP, SDGs, etc.) are relevant for your company?
- Which topics and key figures must be disclosed?
- What do stakeholders expect from a sustainability report?

## Our approach: support where you need it

Many companies already have initial ESG data and strategies. Our aim is to optimize these, close gaps and guide you efficiently towards legally compliant reporting. We tailor our support to your needs.

1. **Clarify the starting position: ESG starting point and gap analysis** Together, we identify regulatory and strategic gaps and develop specific measures to close these gaps.

**Result:** A structured overview of your company's ESG maturity level and the next steps (gap analysis and roadmap).

2. **Materiality analysis – the basis for your report**

Not every sustainability issue is equally relevant for every company. The **materiality analysis** helps to identify the important topics from the perspective of the company and its stakeholders.

### 3. preparation of the report

Based on the materiality analysis and the legal requirements, we support you in preparing a transparent sustainability report.

- **We use existing structures**, such as risk and management reports and certification documents, to save time and resources
- **We structure your sustainability report** according to sustainability standards such as GRI and with the necessary key figures in the respective chapters.
- **We help you to create a data-based sustainability report** by identifying the necessary key figures and helping you to collect and present them correctly.
- **We create a standard-compliant CO<sub>2</sub> balance sheet** for your reporting
- **We check your existing or new report for compliance** with legal requirements or voluntary standards

**Result:** A meaningful and legally compliant sustainability report that creates transparency and optimally communicates your sustainability strategy.
