More and more companies are using sustainability reporting to make their progress visible and to build trust through transparency. At the same time, legal requirements in this area are increasing, such as the Swiss Code of Obligations (CO) on non-financial reporting or the EU Corporate Sustainability Reporting Directive (CSRD). These regulations require structured disclosure of environmental, social and governance (ESG) issues. In addition, customers, investors and suppliers increasingly expect detailed sustainability information.

Typical challenges faced by our clients

- Which legal requirements and standards (CO, CSRD, GRI, ESRS, VSME, TCFD, SBTI, CDP, SDGs) are relevant for our company?
- Which topics and key figures must be disclosed?
- What do stakeholders expect from a sustainability report?

Our approach: support where you need it

Many companies already have initial ESG data and strategies. Our aim is to optimize these, close gaps and guide you efficiently towards legally compliant reporting. We adapt our support to your specific needs.

1. **Clarify the starting position: ESG starting point and gap analysis**
   Together we identify regulatory and strategic gaps and define measures to close them.
   Result: A structured overview of your company's ESG maturity level and the next steps (gap analysis and roadmap).

2. Materiality analysis – the basis for your report

Not every sustainability issue is equally relevant for every company. The materiality analysis helps identify the important topics from the perspective of the company and its stakeholders.

3. Preparation of the report

Based on the materiality analysis and the legal requirements, we support you in preparing a transparent sustainability report.

- We use existing structures such as risk and management reports and certification documents to save time and resources
- We structure your report according to recognized standards such as GRI, with the necessary key figures in the respective chapters
- We help you create a data-based report by identifying the relevant KPIs and supporting you in their collection and presentation
- We prepare a standard-compliant CO_2 balance sheet for your reportingWe review your existing or new report for compliance with legal requirements or voluntary standards

Result: A meaningful and legally compliant sustainability report that creates transparency and communicates your strategy effectively.
[More about CO_2 balancing and carbon footprint]

Your benefit

- Efficient use of existing data and structures
- A clear structure for transparent reporting and future reports
- Strategic added value for corporate development and communication
