# Sustainable development of municipalities

Many municipalities are already actively implementing sustainability projects today. In the sense of «Local Agenda 21», they contribute to a balanced development of the environment, economy and society and can thus improve their attractiveness as a location. Especially for newcomers from the city, these aspects play an increasingly important role.

However, there is often a lack of a clear vision, good coordination or a focus of sustainability activities, or important areas are left out. Integration into existing systems such as NPM, WoV etc. is also sometimes still in its infancy.

## The services of Neosys AG:

We support you in clarifying the sustainability vision or the legislative goals of your municipality and in analysing your starting position.

We advise you on the selection and implementation of suitable development tools such as management systems and their integration into existing systems such as WoV, NPM, etc.
